PROFESSIONAL OVERVIEW

Ms. Linsey DeBell is an HSE professional with over 20 years of experience in digital solutions, and air quality compliance and data management. She has supported clients in the oil and gas industry with implementing and evolving digital solutions including Enablon modules and with air quality permitting and compliance efforts. She has supported Enablon implementations over the last twelve years.

Ms. DeBell has supported Enablon implementations, upgrades, and/or operations and maintenance and enhancements projects for the AQS, RCM, Water, Metrics, Inspections, CMS, JHA, MOC, Risk, IMS, Action Plans modules and Shared Functions. She has managed programs, projects and specific workstreams for these projects and also supported as the business analyst with responsibility for defining future business process and solution design. A particular area of strength is supporting clients with harmonized compliance tasking based on permit deconstructions and regulatory review with integrations to work order systems for tasks carried out by operations staff.

Ms. DeBell has also managed and provided long-term extension of staff compliance support to various major O&G corporations including Title V permit compliance certifications, Title V permit renewal applications, construction permit applications, ad-hoc regulatory applicability reviews, building compliance tools, and detailed compliance reviews including source characterization and line-by-line applicability determinations for complex and obscure rules such as BWON and SR MACT.
