#### PROFESSIONAL OVERVIEW

Sally has more than 20 years of experience providing Clean Air Act compliance support and multi-media project management to various private sector (e.g., Food & Beverage, pulp & paper, higher education, real property management), Federal, and municipal clients. She brings in-depth, on-site experience from managing air programs at several large U.S. Army installations for seven of those years and applies that knowledge to assist other client sectors. Sally was involved in U.S. Army sustainability program initiatives for air quality and worked closely with regulators to provide justification to modify a regulation. Sally understands the importance of engaging stakeholders early-on, implementing best practices that foster business sustainability, and considering potential multi-media environmental issues and implications. She has extensive experience in assisting building managers and facility engineers with their air permitting and compliance needs and identifying the requirements to address multi-media issues.

Sally has prepared numerous Title V annual certification/semi-annual monitoring reports, conducted air compliance audits, provided strategic thinking and justification to disaggregate tenants from facilities, overseen the preparation of emission statements and inventories, and prepared public outreach materials to increase awareness about environmental compliance concerns. Sally is experienced with Title V and minor new source review permitting for various processes including combustion sources, spray booths, woodworking, and metal plating, and the development of permitting strategies to minimize economic burdens and construction project delays. For multiple clients, Sally has conducted applicability determinations and compliance assessments for New Source Performance Standards (NSPS) and National Emissions Standards for Hazardous Air Pollutants (NESHAPs) regulations, developed and provided effective air compliance training for equipment operators and management, and prepared various compliance plans and standard operating procedures.
